Summary

Mid-Level Flutter Developer with 2+ years of experience building cross-platform mobile applications. Proven track record of delivering scalable apps using Clean Architecture, Bloc/Provider state management, and Firebase integration. Strong problem-solving skills with a focus on performance optimization and maintainable code. Passionate about collaborating with cross-functional teams to create polished user experiences.

Technical Skills

Languages: Dart, JavaScript/TypeScript Python, C++, SQL

Frameworks: Flutter, node.js, Firebase, REST APIs, Git

Tools: Android Studio, VS Code, Postman, Figma

Concepts: OOP, Clean Architecture, State Management, Agile Methodologies

Experience

Flutter Developer Aug 2024 – Present

Intrazero *Nasr City, Egypt*

- Developed and maintained cross-platform mobile applications using Flutter framework
- Implemented clean architecture patterns for scalable and maintainable code
- Collaborated with UI/UX designers to implement pixel-perfect interfaces
- Integrated with RESTful APIs and third-party services
- Participated in code reviews and agile development processes

Freelance Mobile Developer Jun 2022 – Jul 2023

Self-Employed *Remote*

- Developed custom mobile applications for clients across various industries
- Worked closely with clients to gather requirements and deliver solutions
- Implemented state management solutions using Provider and Bloc patterns
- Published applications to Google Play Store and handled deployment processes

Education

Benha University Shoubra, Cairo - Egypt

Bachelor of Computer Engineering — Very Good *Sep 2019 – Jun 2024*

- Relevant coursework: Software Engineering, Mobile Development, Data Structures, Algorithms
- Final year project: Developed a Flutter-based healthcare application with AI features

Projects

Nilefy — *Nest.js, TypeScript, PostgreSQL, JWT* Oct 2023 – Jun 2024

- Led backend development of a low-code platform for creating business dashboards and internal tools
- Designed plugin-based architecture enabling seamless data source integration with secure REST API connectivity
- Implemented version control using GitHub workflows, reducing merge conflicts by 30% and improving code quality

ASL Translator — *Flutter, Python (Flask), Google Cloud, FFmpeg*

- Built cross-platform app for American Sign Language translation via video uploads with 85% accuracy
- Developed Google Cloud-hosted backend using FFmpeg for frame extraction and Python/Flask for classification
- Implemented secure video uploads (Firebase Storage) with progress tracking and 40% latency reduction

Certifications

Flutter Development Bootcamp - Udemy (2022)

Advanced Dart Programming - Coursera (2022)

Firebase for Flutter Developers - Google Developers (2023)
